- A) a dielectric layer;
- B) a conductive layer above or below the dielectric layer; and

C) a temperature sensitive color indicator layer in thermal contact with the conductive layer, characterized in that 1) the conductive layer has i) sufficient heat generating capacity to affect a change in the temperature sensitive color indicator layer and ii) sufficient thermal insulating means under one of its surfaces to overcome heat sinking when the voltmeter is in contact with a battery having an electrically conducting housing and 2) the voltmeter includes means for forming an electrical switch with the electrically conductive battery housing.

The claims of the parties which correspond to count 1 are:

Wang et al.:	Claims 22 to 24 and 43 to 63
